

Lab Time: Friday 16:00 ~ 17:50

Hyunjae Kim

QUESTIONS

1. For this lab, you will be asked to perform arithmetic operations on numbers that are larger than 8 bits. To be successful at this, you will need to understand and utilize many of the various arithmetic operations supported by the AVR 8-bit instruction set. List and describe all of the addition, subtraction, and multiplication instructions (i.e. ADC, SUBI, FMUL, etc.) available in AVR's 8-bit instruction set.

(a) Add

- ADC Add with Carry
- ADD Add without Carry
- ADIW Add immediate to word

(b)Subtraction

- SBC Subtract with carry
- SBCI Subtract immediate with carry
- SBIW Subtract immediate from word
- SUB Subtract without carry
- SUBI Subtract immediate

(c)Multiplication

- MUL Multiply unsigned
- MULS Multiply signed
- MULSU Multiply signed with unsigned
- FMUL Fractional multiply unsigned
- FMULS Fractional multiply signed
- FMULSU Fractional multiply signed with unsigned

2. Write pseudocode for an 8-bit AVR function that will take two 16-bit numbers (from data memory addresses \$0111:\$0110 and \$0121:\$0120), add them together, and then store the 16-bit result (in data memory addresses \$0101:\$0100). (Note: The syntax "\$0111:\$0110" is meant to specify that the function will expect little-endian data, where the highest byte of a multi-byte value is stored in the highest address of its range of addresses.)				
	LDI XH, \$01			
	LDI XL, \$10			
	LDI YH, \$01			
	LDI YL, \$20			
	LD r15, X+			
	LD r16, Y+			
	ADD r15, 16			
	STS \$0100, r15			
	LDI r15, X			
	LDI r16, Y			
	ADC r15, r16			
	STS \$0101, r15			
	rite pseudocode for an 8-bit AVR function that will take the 16-bit number in \$0111:\$0110, subtract it from 16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100.			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100.			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100.			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01 LDI YL, \$20			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01 LDI YL, \$20 LD r15, X+			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01 LDI YL, \$20 LD r15, X+ LD r16, Y+			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01 LDI YL, \$20 LD r15, X+ LD r16, Y+ SUB r16, r15			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01 LDI YL, \$20 LD r15, X+ LD r16, Y+ SUB r16, r15 STS \$0100, r16			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YL, \$20 LD r15, X+ LD r16, Y+ SUB r16, r15 STS \$0100, r16 LDI r15, X			
	16-bit number in \$0121:\$0120, and then store the 16-bit result into \$0101:\$0100. LDI XH, \$01 LDI XL, \$10 LDI YH, \$01 LDI YL, \$20 LD r15, X+ LD r16, Y+ SUB r16, r15 STS \$0100, r16 LDI r15, X LDI r16, Y
